Meeting 4

Date: 20/04/2016

Facilitator: Emil

Participants: Tuyen, Emil, Jonathan, Tove, Allex

Objectives (5 min).

Make the specifications for our application clearer, such as the search bar. We also need to specify our project's report's disposition.

Reports (15 min).

We are finished with our sketches, and have two runnable tests of use cases. The sequence diagram for a high-priority use case is also finished.

Discussion Items (35 min).

We are making sure to have a solid, good base to start building on before getting going with serious coding. This means having elaborate sketchwork done, as well as discussing specifications and design-choices in great detail.

Outcomes and Assignments (5 min).

Finish the specification (will probably be changed in the future), have a consistent design for the application and perhaps start implementing if the pre-coding work gets finished soon.

Wrap up!

Next meeting: 22/04/2016
